ABSTRACT

AS  
The components such as a control section (microcomputer) (not shown), a display (liquid crystal display) (14), and RF communication section (not shown) of which the corresponding function blocks are mounted on the hard substrate (27) are arranged and accommodated within the upper case (11), and the key operation section (18) and a battery (29) of which the function blocks are mounted on the key board (flexible board 28)), ~~and a battery (29)~~ are arranged and accommodated in the lower case (12). Consequently, an antenna (13) is disposed on the upper case (11) having the RF communication section (not shown), and the key operation section (18) and the battery (29) are arranged and accommodated within the lower case (12), so that a slim profile as well as lightweight and downsizing are realized by bringing the function blocks to be arranged and accommodated in the upper case and the lower case closer by function in contrast to the example of the related art.
